## Purpose

This guide will outline how to create, correct, and close a deposit within RDC.

If you need additional help, please contact our Treasury Support Services Team at (800) 453-8700 option 2 or by email at treasurysupport@mercbank.com. Our Treasury Support Services Team is here to assist you during the business hours of 8:00 AM to 5:30 PM EST, Monday through Friday.

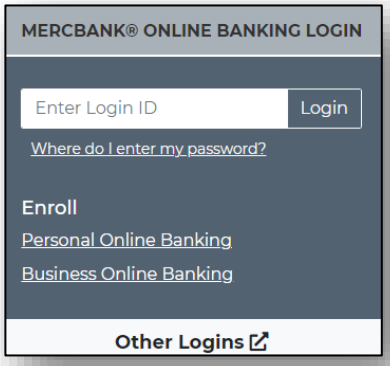
## Overview

Completing a deposit in RDC is a three-step process:

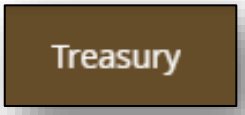
1) Scan the checks into RDC.
2) Review and make corrections, if needed (e.g., rescan or delete item)
3) Send the deposit to the bank for processing.

## Step-by-Step

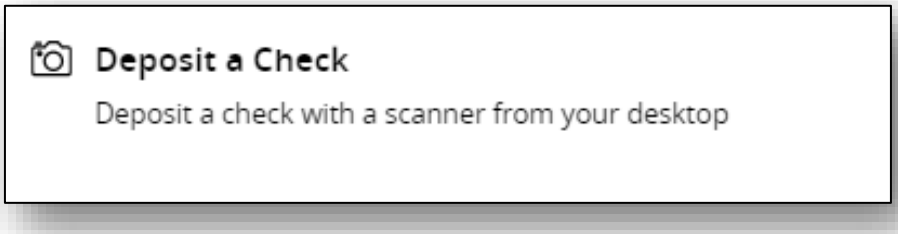
**1) Go to** https://www.MercBank.com and **Login.**



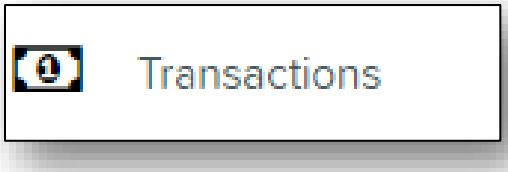
**2)** From the toolbar, **select Treasury.**



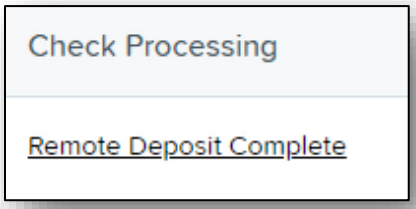
**3)** From the Treasury Services section, **select Deposit a Check.**



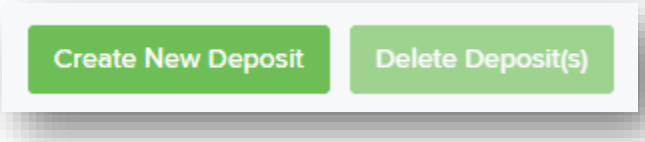
**4)** Once the portal has launched, **select Transactions**.



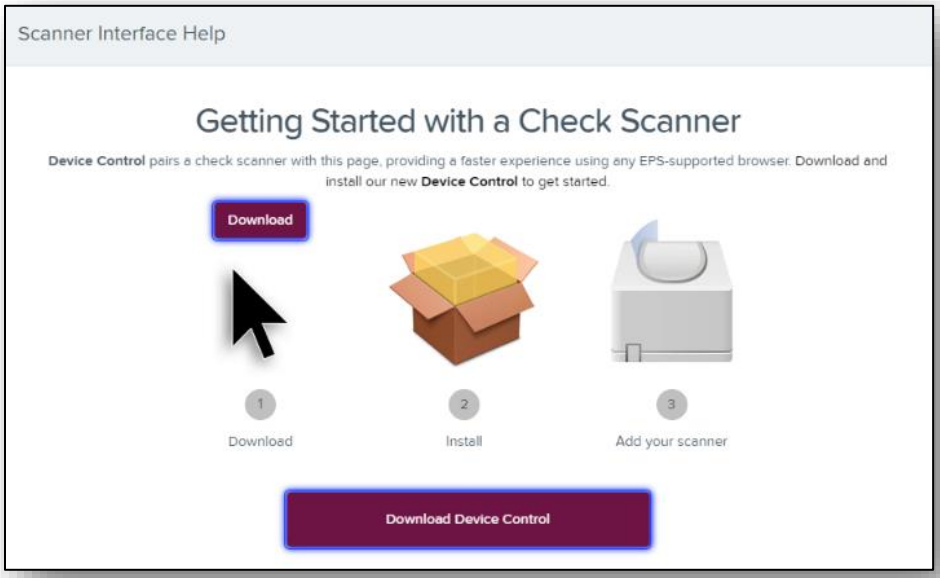
**5)** On the next screen, **select Remote Deposit Complete** to launch the service.



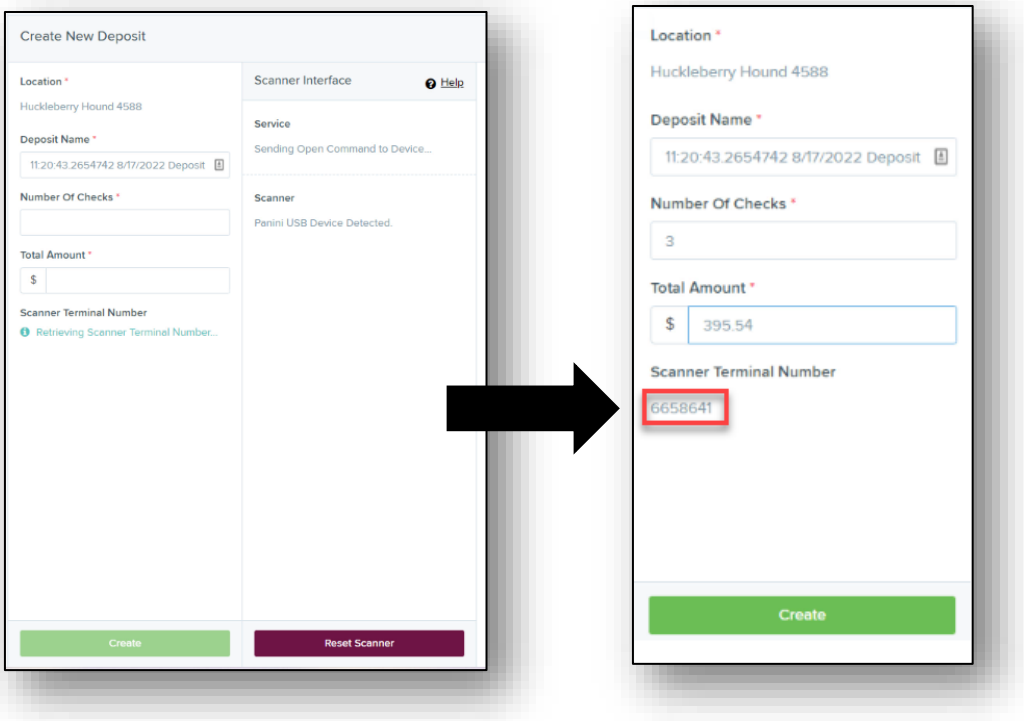
**6)** From the *Open Deposits* screen, **select Create New Deposit** at the bottom right of the screen.



**7)** A *Getting Started* prompt may display, **select Download Device Control** to load.

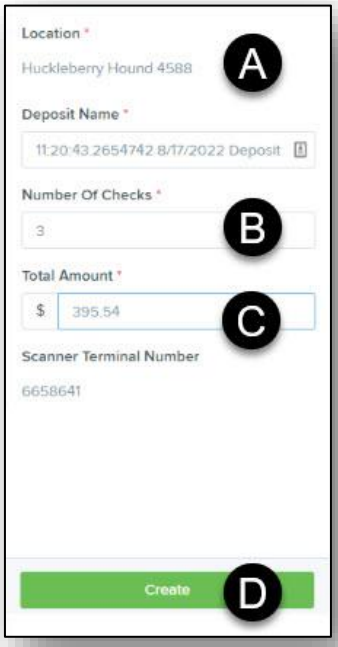


**Note -** The download is complete once the scanner interface panel displays the *Scanner Terminal Number* Proceed to the next step.



**8) Select** the **Location** (deposit account) then **enter** the **number of checks**, **total amount** of the full deposit, and then **select Create**.

A. Location (deposit account)
B. Total number of checks in deposit
C. Total amount of all checks
D. Create button

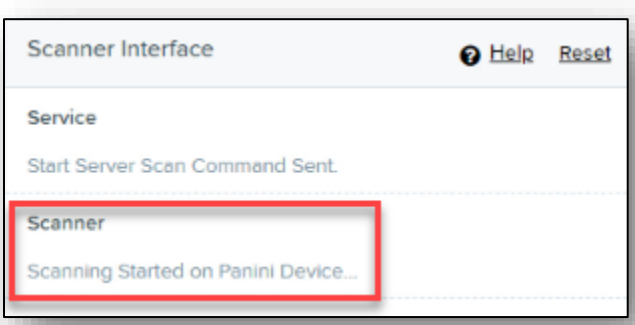


**9)** As the next screen loads, **prepare** the **checks** to scan:

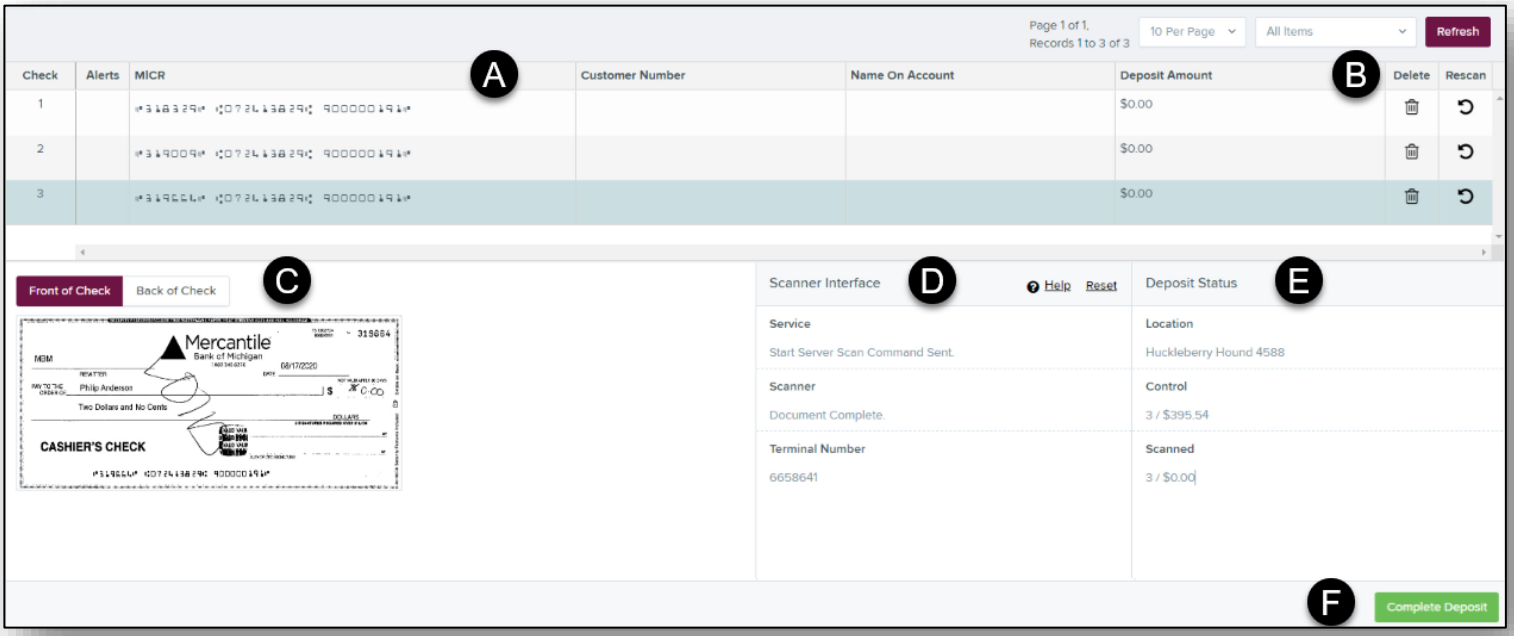
- Each scanner typically displays where and how the check should be inserted. Commonly, this is on the right-side facing out to the right, but others may require to feed a single check facing upward through the front with the MICR line facing the right.
- A virtual endorsement is set-up for each customer with the service, but you are welcome to add an endorsement indicating that the check is for electronic deposit only or similar restrictive endorsement.
- If you have a multi-feed scanner, it is recommended that larger checks go in the back and smaller ones to the front. Make sure that all checks are aligned. This can be accomplished by "jogging" or tapping the checks on a surface.
- Some multi-feed scanner models have a catch tray that extends for larger checks, make sure this feature is pulled out to avoid check jams.
- *Cannot* accept international checks.

**10)** Under *Scanner Interface* at the bottom right-side of the screen the Scanner section will indicate "Scanning started on….", which means that checks can be fed into the scanner. It may take a moment to load. If the scanner isn't processing the check, select the reset button, which may need to be selected a couple of times.

**Insert Check(s) into scanner. Note** - some scanner models are single-feed and only once check can be scanned at a time.



**11)** As checks are scanned, they will display on the screen along with other details and options.



A. **Item Display -** Shows the check number, alerts, MICR details, and deposit amount fields.

B. **Delete, Rescan, and Refresh -** Items have to be rescanned when they cannot be read by the scanner and an alert appears. Select rescan *prior* to placing the check in the scanner. Delete will remove any duplicate check items or items that could not be scanned. Refresh, can help to update the screen and clear errors or update totals.

C. **Check View -** The front/back image of the check can be reviewed.

D. **Scanner Interface -** Displays the status of the scanner with the option to “Reset” after a check jam or if the scanner isn’t processing checks when the screen loads.

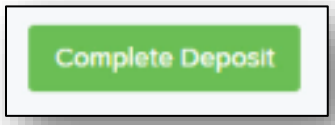
E. **Deposit Status -** Shows the account for deposit and the control totals entered to what was scanned.

F. **Complete Deposit -** Completes the deposit from further edits.

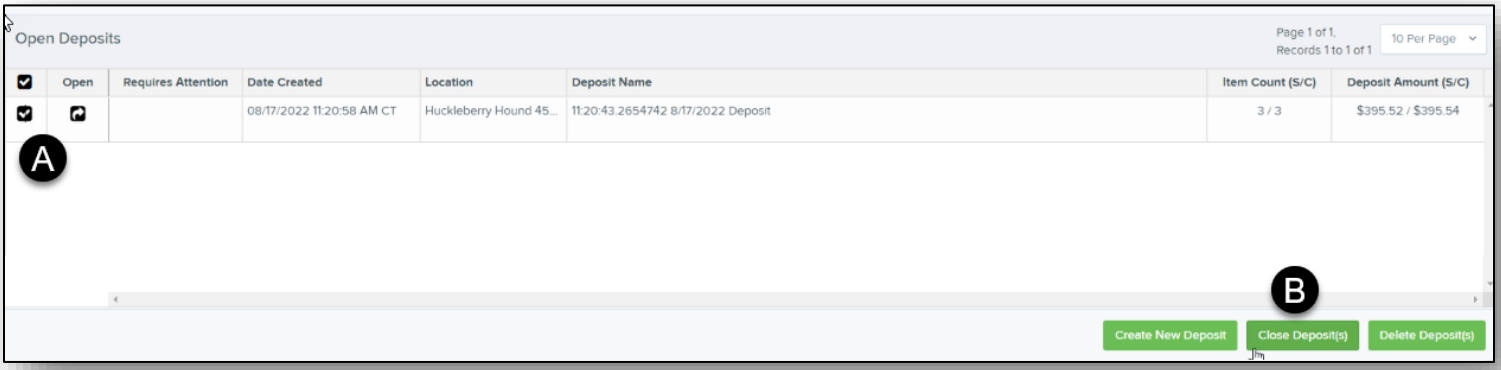
**Check Scanning Details:**

- When checks are initially scanned, the program will *not* display the amounts. The refresh button can be selected to update, but not required to complete the process.
- MICR details *cannot* be edited. In the event the system cannot read a check, the item has to be rescanned to see if the alert is removed. If not, the item(s) has to be deleted from the batch and submitted to the Bank, ATM, mailed, or use of the mobile app.
- Dollar amounts *cannot* be edited. In the event the amount cannot be read, or the amount was read incorrectly (e.g. 15.34 becomes 1.53), the deposit can still be completed and sent to the bank for processing. When the control totals and scanned details are off in any way, a back-office team reviews the deposit and can make the appropriate corrections.
- The cut-off time for deposits is 5pm ET. Deposits made by the cut-off will be credited to the account during overnight processing.
- Retain checks for 14 calendar days in a secure location. After that, they can be destroyed.

**12)** Once all items have been scanned, **select Complete** to continue.

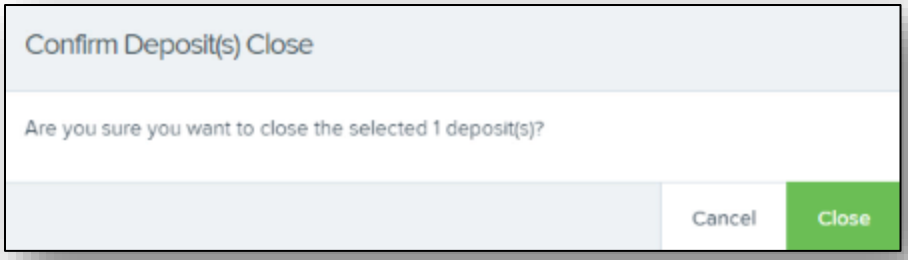


**13)** From the *Open Deposits* screen, **select** the **checkbox** and then select **Close Deposit(s)**.



A. Deposit selection checkbox
B. Close Deposit button

**14)** The *Confirm Deposit(s) Close* menu will display, **select Close.**

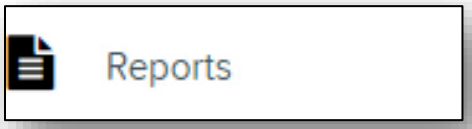


**Note -** A confirmation e-mail will be sent to the scanning user that submitted the batch letting them know if it was successful or if anything was rejected.

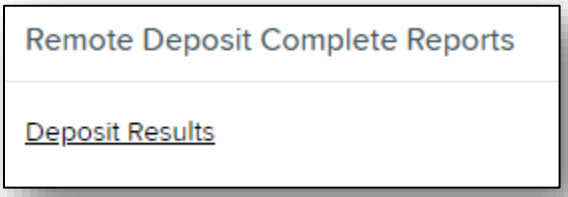
**Deposit Summary Report**

**Overview -** Once a deposit is closed, a detail summary report can be pulled within the system as confirmation of all items deposited in a batch.

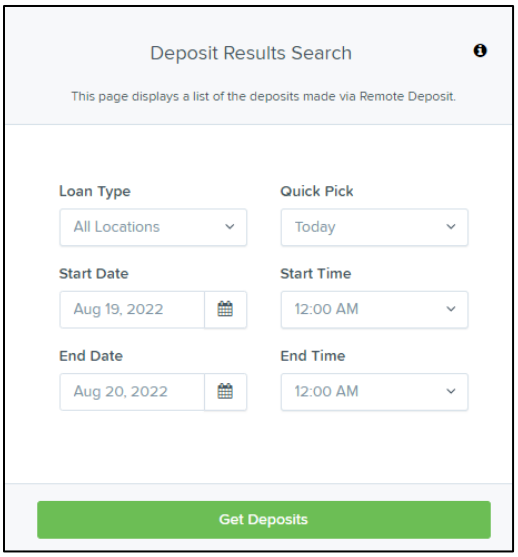
**1) Select Reports** from left panel.



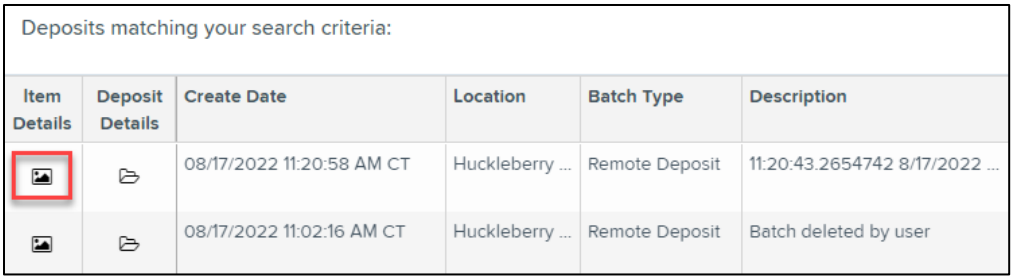
**2)** On the far right-side of the screen, **select Deposit Results**.



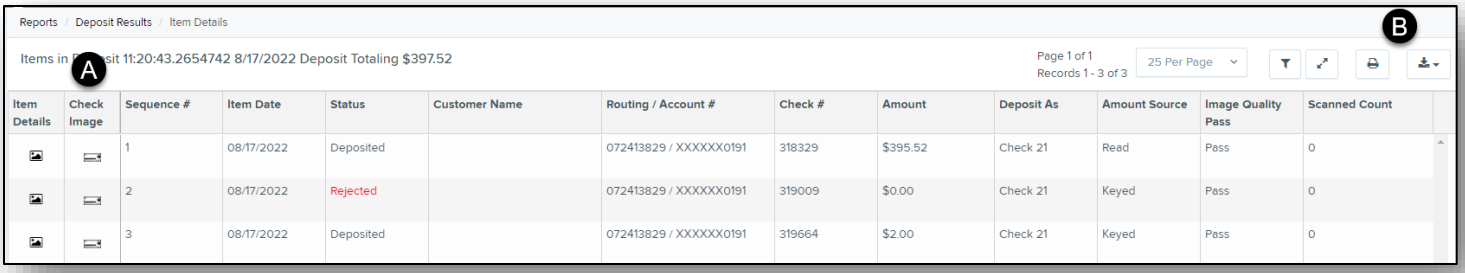
**3)** Deposit information is available for 180 days. Use the Deposit Results Search filters to adjust search criteria. **Select Get Deposits** to continue.



**4)** **Select Item Details icon** to continue.



**5)** From the *Item Details* screen, you can view the check image or select the quick print/download options.



A. View check images
B. Quick print or download
